

18. The system according to claim **16**, wherein the responding device is at least one selected from a group consisting of: a vehicle and a prosthesis.

19. The system according to claim **16**, wherein:
the responding device is at least one selected from a group consisting of: a personal computer, a laptop, a smart-phone, and a tablet, and
the emulated target device controller includes at least one selected from a group consisting of: a virtual mouse and a virtual keyboard.

20. The system according to claim **16**, wherein:
the responding device is an actuator having a second communication module, and
upon the sensor module detecting an instruction from a user that is compatible with the emulated target device controller and the responding device, the processor, using the first communication module, is configured to transmit the instruction to the second communication module and cause the actuator to actuate according to a command that corresponds to the instruction.
